Drug discovery and development Drug development process. A variety of approaches is employed to identify chemical compounds that may be developed and marketed. The current state of the chemical and biological sciences required for pharmaceutical development dictates that 5,000-10,000 chemical compounds must undergo laboratory screening for each new drug approved for use in humans.

Pharmaceutical industry - Drug discovery and development

Modern drug discovery has consisted of a series of thematic developments that began with the isolation of pure alkaloids and glycosides from plants in the early years of the nineteenth century.
