Note that $\log_b(0)$ is undefined because there is no number x such that $b^x = 0$. In fact, there is a vertical asymptote on the graph of $\log_b(x)$ at $x = 0$. Cancelling exponentials. Logarithms and exponentials with the same base cancel each other. This is true because logarithms and exponentials are inverse operations (just like multiplication and division or addition and subtraction).

The slide rule, or slipstick, is a mechanical analog computer. The slide rule is used mainly for multiplication and division, and also for "scientific" functions such as roots, logarithms and trigonometry, but usually not for addition or subtraction.. There are many different styles of slide rules. They are usually linear or circular. They have a standardised set of markings (called scales).
