Dental plaque is a biofilm or mass of bacteria that grows on surfaces within the mouth. It is a sticky colorless deposit at first, but when it forms tartar, it is often brown or pale yellow. It is commonly found between the teeth, on the front of teeth, behind teeth, on chewing surfaces, along the gumline, or below the gumline cervical margins. Dental plaque is also known as microbial plaque ...

Our simulations demonstrate the conditions under which phage therapy may be able to limit the proliferation of bacterial populations. High phage densities are needed in order to arrest the growth of phage susceptible bacteria (Fig. 1 a, b). We have indicated an arbitrary upper bacterial concentration threshold of 10^9 CFU/ml as an aid to guide the reader's eye.
