simultaneous update of multiple model parameters (see for instance [4], [5]). These techniques minimize the test/analysis deviations and enable the validation of the Finite Element model.

Various concepts exist to introduce texture-related sheet anisotropy into finite element models for sheet forming. The initial material anisotropy existing before sheet deformation can be incorporated either through an anisotropic yield surface function or directly via the incorporation of crystallographic texture models into the finite element codes.

Overview. Much like the continuous Galerkin (CG) method, the discontinuous Galerkin (DG) method is a finite element method formulated relative to a weak formulation of a particular model system. Unlike traditional CG methods that are conforming, the DG method works over a trial space of functions that are only piecewise continuous, and thus often comprise more inclusive function spaces than ...

What Is a Least Squares Model? Many problems in analyzing data involve describing how variables are related. The simplest of all models describing the relationship between two variables is a linear, or straight-line, model.

In computer science, an array data structure, or simply an array, is a data structure consisting of a collection of elements (values or variables), each identified by at least one array index or key. An array is stored such that the position of each element can be computed from its index tuple by a mathematical formula. The simplest type of data structure is a linear array, also called one ...

EPUB Publications 3.0.1 EPUB is an interchange and delivery format for digital publications based on XML and Web Standards. EPUB 3, the third major revision of EPUB, is defined by a set of specification documents including this document, which defines publication-level semantics and conformance requirements for EPUB 3.

Models of the Universe are described and classified into three major categories: Historic, Expanding, and Cellular. It is shown that all expanding universe models violate the cosmic edge and containment principle. The multi-millennium conflict between the two major world views --the changing dynamic universe and the unchanging stable universe-- is highlighted.

2.1. The ETL phases. During the ETL process, data is extracted from an OLTP database, transformed to match the data warehouse schema, and loaded into the data warehouse database (Berson and Smith, 1997, Moss, 2005). Many data warehouses also incorporate data from non-OLTP systems, such as text files, legacy systems, and spreadsheets.

Big blocks are critical to Bitcoin's scaling to higher transaction rates; after a lot of arguing with no progress, some people made Bitcoin Unlimited and other forks, and promptly screwed up the coding and seem to have engaged in some highly unethical tactics as well, thereby helping discredit allowing larger blocks in the original Bitcoin; does this make it a real-world example of the ...

Matching the document production implies that: . It contains one or more elements. There is exactly one element, called the root, or document element, no part of which appears in the content of any other element. For all other elements, if the start-tag is in the content of another element, the end-tag is in the content of the same element.
